Before the campaign
1. Deploy stack
tools/run_campaign.py (stack_up, stack_healthy)
2. Locust workload
infra/_locustfile_*.py
run_pilot.start_load
3. Trace collection (Jaeger)
measurement/metrics_collector.py
4. Graph reconstruction
tools/extract_graph.py -> data/graphs/
5. Predictor computation
tools/build_predictor_table.py
centrality/
6. Preregistration lock
PREREGISTRATION_v3_LOCKED.md
Steps 7-10 in each of the 180 runs; 11-12 after the campaign
7. Fault injection (Pumba kill / netem)
faultinjection/fault_config.py
run_pilot.one_run
8. Per-service metric extraction
measurement/metrics_collector.py
9. Blast-radius classification
measurement/blast_radius.py
10. Recovery probe
measurement/recovery_probe.py
11. Integrity gates
tools/audit_run_topology.py
tools/audit_baseline_sanity.py
12. Statistical analysis
analysis/final/run_confirmatory_analysis.py
