Hotel Reservation, latency fault injected into 'search'. Excluding the faulted service, the old scope flags 5 services that clear the 2x threshold together because they share a trace; the corrected scope flags 1. Asterisk marks a flagged service.
OLD scope: end-to-end root span
(every service charged the trace tail)
flagged: frontend, geo, profile, rate, reservation, search
CORRECTED scope: the service's own server spans
flagged: frontend, search
p95 latency (ms, log scale)
baseline p95
fault p95
